DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1 and 3 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Genma et al. (US Patent 5,202,088) .
4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brickner (US Patent 3,713,812).
5. Each reference teaches a ferritic steel alloy having a composition which meets one or more of the recited claims. See Genma, alloys 7,8, 12-16, and 29-33 in Table 2, columns 5-8; and Brickner, alloys V9157-2,v9163-1 to V9167-1 in Table I of column 3.
6. Moreover in regard to carbide precipitation, Genma on lines 8 to 29 in column 3 discloses the formation of V and Nb carbides, and Brickner on lines 15 to 20 in column 4 suggest interaction between carbon and Nb (Nb). Although Ti, Nb, Zr, V and/or W carbide precipitates distributed in a steel matrix is 0.1wt% or more as recited by the claims 1 and 3 is not taught by prior art, such carbide distribution would be expected since compositional limitations are met and in absence of proof to the contrary.

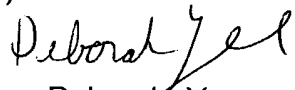

Art Unit: 1742

7. Also even though prior art does not specifically teach a cold rolled steel sheet as recited by the claims, such would not be a patentable distinction. Note that cold rolling is a well-known technique in the metallurgical art to further shape and strengthen steel and hence would be a matter of choice well within the skill of the artisan to apply to steel to produce no new and unexpected results. Moreover, applicant's specification does not suggest cold rolling as a critical step since present invention can be made by other techniques such as, hot rolling and annealing as evident on page 6 of his specification.
